Here are some challenges involving consecutive numbers and multiples.
Can you find three consecutive numbers where the first is a multiple of 2 , the second is a multiple of 3 and the third is a multiple of 4 ?

Can you find several examples?

$\square$

$\square$
$\square \square \square$

What do you notice?
Can you explain your findings?

What if the first is a multiple of 3 , the second is a multiple of 4 , and the third is a multiple of 5 ?

What if the first is a multiple of 4 , the second is a multiple of 5 , and the third is a multiple of 6 ?

Is there a way to find sets of four consecutive numbers which are multiples of 2, 3, 4, and 5 (in this order)?

Or five consecutive numbers which are multiples of $2,3,4,5$, and 6 (in this order)?

Can you use what you have discovered to help you find a few sets of ten consecutive numbers in which:

- the first is a multiple of 1
- the second is a multiple of 2
- the third is a multiple of 3
- the fourth is a multiple of 4
- the fifth is a multiple of 5
- the sixth is a multiple of 6
- the seventh is a multiple of 7
- the eighth is a multiple of 8
- the ninth is a multiple of 9
- the tenth is a multiple of 10 ?
