

# Fifteen

This is a game for two players.

**Take it in turns** to choose **one** of the whole numbers **1** to **9**.

Each number can be chosen only once.

To win, you must have three numbers that add up to **15**.

If each person has three numbers and neither player has a total of 15, continue playing until one of you has three of their digits totalling 15, or stalemate is reached.
