## Always, Sometimes or Never? - Statement cards

Are the following statements always true, sometimes true or never true?

| A hexagon has six equal length sides | Triangles have a line of symmetry |
| :---: | :---: |
| Squares have two diagonals that meet <br> at right angles | Cutting a corner off a square <br> makes a pentagon |
| The base of a pyramid is a square | A cuboid has two square faces |

## What about these statements?

| When you cut off a piece from a 2D <br> shape you reduce the area and <br> perimeter | Triangles tessellate |
| :---: | :---: |
| The number of lines of symmetry in a <br> regular shape is equal to the number <br> of sides | Quadrilaterals can be cut into two <br> equal triangles |
