

NRICH: mathematics for all

NRICH reaches more than 4 million users a year worldwide, supporting rich, imaginative mathematics education for all.

NRICH provides thousands of free online resources for ages 3 to 18, covering all stages of early years, primary and secondary school education.

NRICH's 'low threshold, high ceiling' activities focus on developing problem solving, and encourage exploration and discussion. Our rich mathematical tasks develop students' capacity to persevere, reason and think creatively. 'Live' problems offer opportunities for students to share their solutions for publication on the site.

Face-to-face workshops, conferences and bespoke training days enhance teachers' professional knowledge. Extensive teacher guidance on 'scaffolding' NRICH problems develops teacher confidence and skills.

Hands-on work with students through NRICH Maths Roadshows promotes exploration, discussion and discovery in primary & secondary schools across the UK & overseas. Student events in Cambridge support the development of mathematical thinking and access to higher education.

NRICH is part of the University of Cambridge's Millennium Mathematics Project, an innovative collaboration between the Faculties of Mathematics and Education. Our philosophy is grounded in education research, providing a strong foundation for effective impact.

NRICH actively contributes to mathematics education discussion and debate, shaping the future through dialogue with policy makers and the mathematical community.
