3

$$9 \times 10 + 3 = 93$$

93 triangles

To make a triangle, you have to connect 3 pins on the circle.

You start from pin no.1 and connect it with pins 1 right and 1 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

Next, you start from pin no.1 and connect it with pins 1 right and 2 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

Then, you start from pin no.1 and connect it with pins 2 right and 1 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

After that, you start from pin no.1 and connect it with pins 1 right and 3 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

Then, you start from pin no. 1 and connect it with pins 3 right and 1 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

Next, you start from pin no.1 and connect it with pins 1 right and 4 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

After that, you start from pin no.1 and connect it with pins 4 right and 1 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

You can't go any further away with the patterns because they make doubles.

And then, you start a new pattern.

You start from pin no.1 and connect it with pins 2 right and 2 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

Next, you start from pin no.1 and connect it with pins 2 right and 3 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

Then, you start from pin no.1 and connect it with pins 3 right and 2 left.

You repeat the pattern with all the other pins, now you have 9 triangles.

You can't go any further away with the patterns because they make doubles.

And then, you start a new pattern.

You start from pin no.1 and connect it with pins 3 right and 3 left.

You repeat the pattern with all the other pins, but you only have 3 triangles

because all other triangles are double.
