Put in the missing symbols to make these number sentences correct. Use $+,-, x, \div$ and $=$.

For example:

$$
\begin{gathered}
2 \square 3=6 \\
\text { is } \\
2 \times 3=6 \\
\text { and } \\
3 \square 5-2 \\
\text { is } \\
3=5-2
\end{gathered}
$$

Try these:
$16 \square 18=34$
$47 \square 28=19$
$18 \square 2=9$
$30 \square 10 \times 3$

All of the number sentences below, except two, have two solutions. Can you find the symbols to use?

Which two number sentences have only one answer?
Can you see why?
