

# Peaches Today, Peaches Tomorrow

Thousands more problems can be found on  
the NRICH Maths website:

**[www.nrich.maths.org](http://www.nrich.maths.org)**

A monkey has 75 peaches.  
Each day, he kept a fraction of  
his peaches, gave the rest away,  
and then ate one.

These are the fractions he  
decided to keep:

$$\frac{1}{2} \quad \frac{1}{4} \quad \frac{3}{4} \quad \frac{3}{5} \quad \frac{5}{6} \quad \frac{11}{15}$$

In which order did he use the  
fractions so that he was left with  
just one peach at the end?
