What should I include in my Terrariums work?

7

Explain how the colour of light affects the rate of photosynthesis

Explain whether the results were reliable

Explain photosynthesis as a symbol equation

Explain the strengths and weaknesses of methods of measuring growth

6

Explain why photosynthesis is needed for growth

Suggest a range of factors that can affect the rate of photosynthesis

Give details of flaws in the method

5

Write the word equation for photosynthesis

Describe how the variables would affect the rate of growth

List controls to make the experiment fair

State the role of the nutrients which plants need to grow

4

List variables that will affect the growth of the plant

Identify that plants need water and light to survive

Name the ways that plant growth could be measured

List the ways the amount of growth could be measured

3

Recognise that plants are living and require certain things for this.

Name conditions needed for plants to grow
