

We love playing with dominoes! There are so many patterns you can make with the dots on them.

You could ask some questions:

- How many dominoes are there where both ends are the same?
- What different totals are there, if you add all the dots on a domino?
- Using only dominoes with different totals, can you make a line of dominoes where the ends that touch always match?
- Using a whole set of dominoes, what's the longest chain you can make where the ends that touch always match?

Once you've explored the dominoes, make some patterns with them on the table or floor.
