

In this activity, we'll be writing down the number 4 four times, putting operation symbols between each to make a calculation.

For example, you could write $4 \times 4 \times 4 - 4 = 60$

What different answers can you get?

Is it possible to get every answer between 0 and 20? If not, which answers aren't possible?

I wonder what you might want to try once you've done that?
