
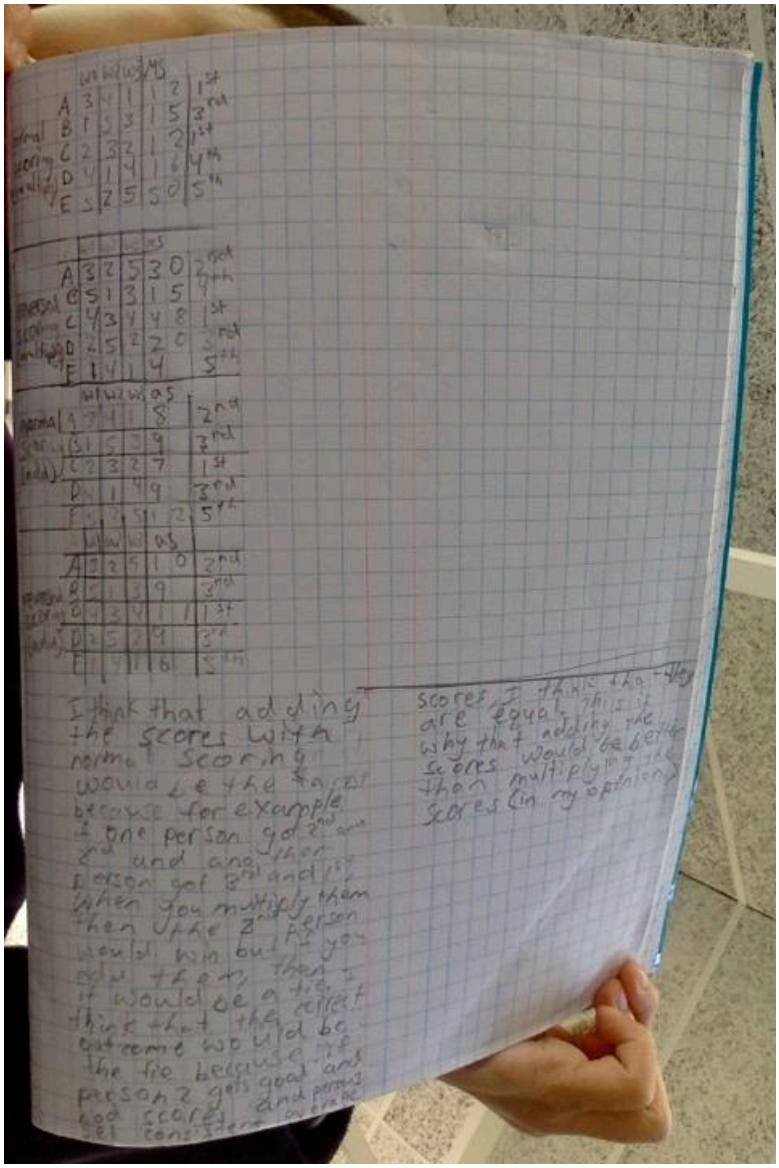
3 1 1 3 1 2 3

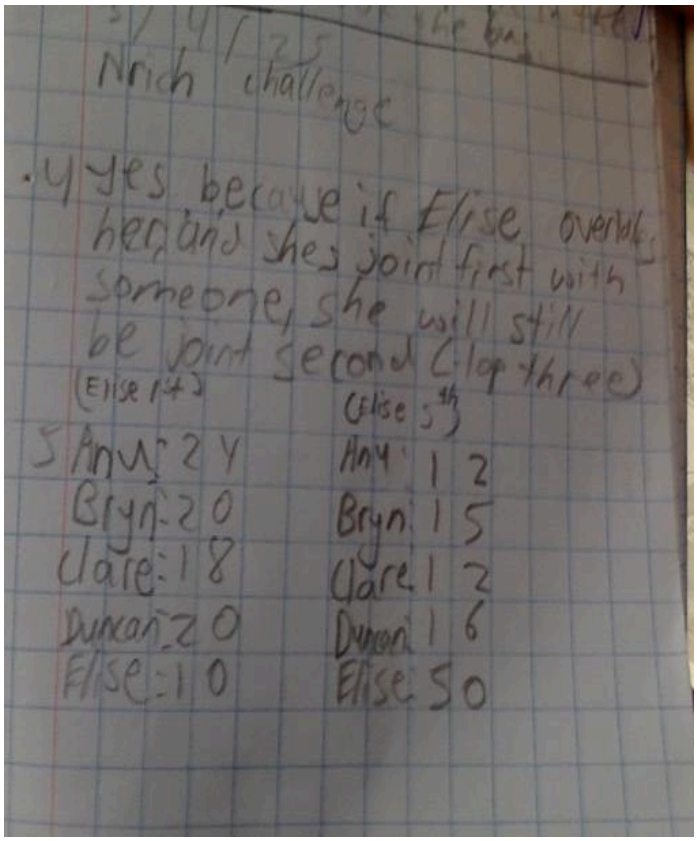
1 Duncan

2 yes, it would be a draw between Duncan and Clare for first and Elise and Ann for last.

3 Ann: 12
Bryn: 15
Clare: 12
Duncan: 16
Elise: 10



I think that adding the scores with normal scoring would be the same because for example if one person got 2nd and 2nd and another person got 3rd and 1st when you multiply them then the 2nd person would win but if you add them then it would be a tie. I think that the correct outcome would be a tie because the person 2 gets good and person 2 gets good scores and gives good scores. I think the scores are equal. This is why that adding the scores would be better than multiplying the scores (in my opinion)



Nrich challenge

4 yes because if Elise overtakes her and she's joint first with someone, she will still be joint second (4 of three)
(Elise 1st) (Elise 3rd)

5 Ann: 2 4 Ann: 1 2
Bryn: 2 0 Bryn: 1 5
Clare: 1 8 Clare: 1 2
Duncan: 2 0 Duncan: 1 6
Elise: 1 0 Elise: 5 0
