level 1

Now suppose I choose treasure on 4, 7.

Strategy

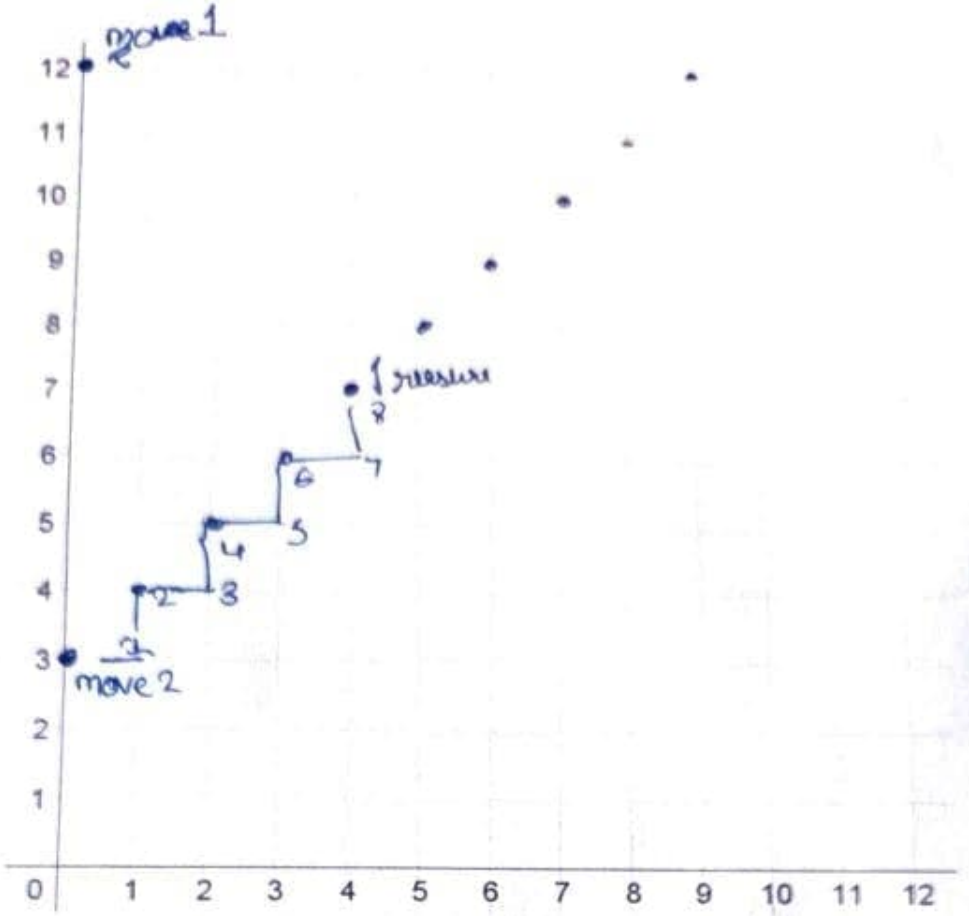

1st step you have to choose the most corner block so their would be less possibilities. So you have to choose 9,0, 0, 12, or 12, 0

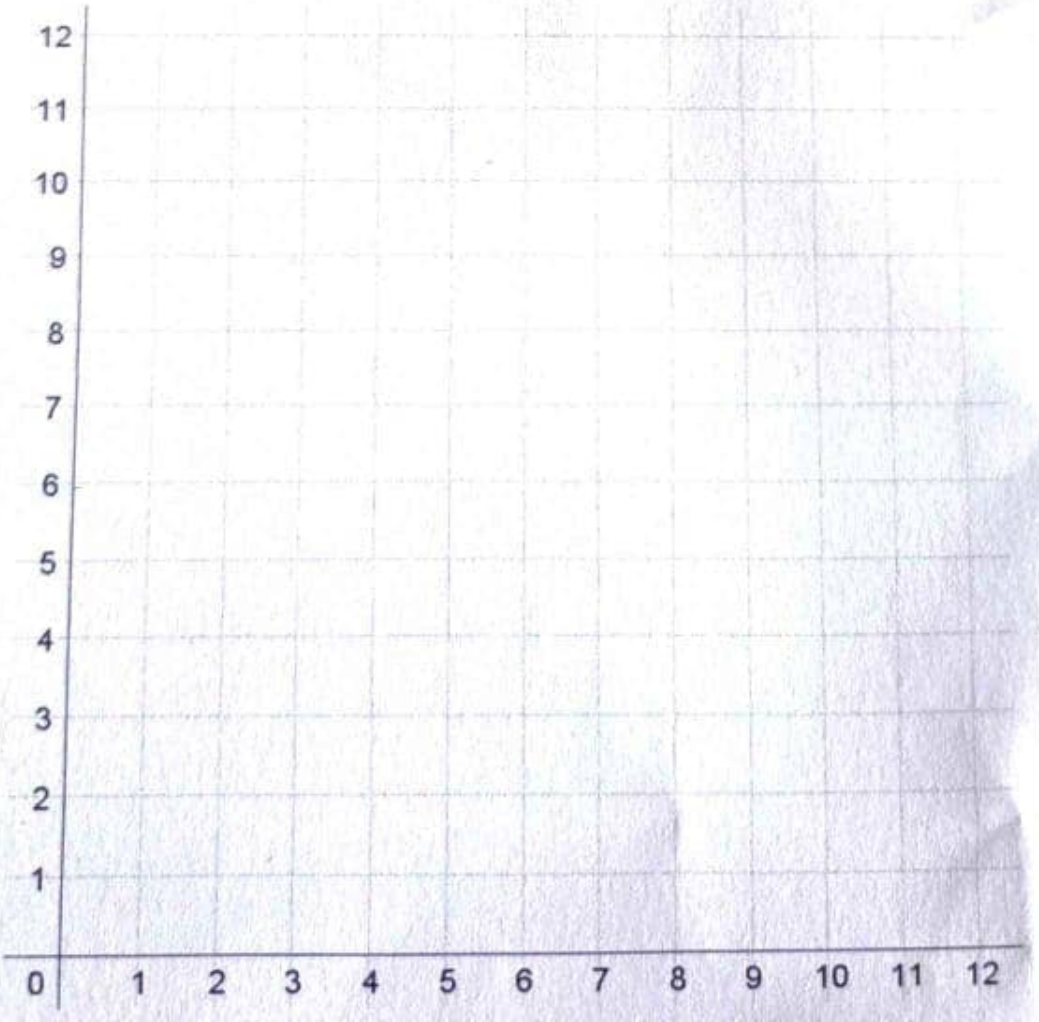

2nd suppose you choose 0, 12 its 9 steps away so mark out all of the markings 9 steps away from 0, 12.

3rd Now you have to choose the corner most point from the new points you have marked out. In this case it is 0, 3 and 9, 12. you can choose any of the two new corners.

I choose 0, 3

4th Its 8 spaces away. Now there is only one so after counting we have found the treasure! Only in three moves! This strategy works every time.

move 1
move 2
treasure
0 1 2 3 4 5 6 7 8 9 10 11 12

0 1 2 3 4 5 6 7 8 9 10 11 12
