

# Making Sticks

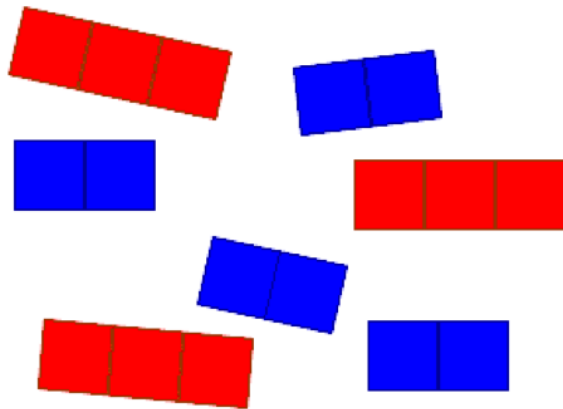

Work with a partner, you are going to make some sticks using cubes.

You have to make blue sticks, 2 cubes long.

Your partner has to make red sticks, 3 cubes long.

Make a lot of sticks!

Put your blue sticks end to end in a long line. Now your partner has to put the red sticks end to end in a line underneath yours.

Can you make your lines the same length?

How many sticks could you use? How many would your partner put down? How long is the line altogether?

Can you make any other lines?
